

WESTERN METALLICA RESOURCES CORP. LAUNCHES DRILLING PROGRAM AT 100% OWNED PENEDELA PROPERTY

TORONTO, ON, May 25, 2022 – Western Metallica Resources Corp. (**TSXV: WMS**) (“**Western Metallica**” or the “**Company**”) is pleased to announce the launch of its inaugural exploration program as a publicly listed company at its 100% owned Penedela Project. The 2022 exploration program includes a planned Phase 1 diamond drilling campaign of 2,000 metres that will target the most prospective areas of the Penedela gold deposit identified to date, a property comprised of approximately 2,500 hectares.

This program follows the successful acquisition of the Penedela property, permitting and NI 43-101 Technical Report in recent months, and Western Metallica’s listing on the TSX Venture Exchange (“TSXV”) under trading symbol “WMS”. The Penedela Project is one of the Company’s three gold properties strategically located in Asturias, Spain, one of the most mining friendly jurisdictions in Western Europe.

Located on the southern edge of the Navelgas Gold Belt, the Penedela Project exhibits characteristics of gold mineralization similar to other significant deposits in the area. The mineralization typically occurs in high-grade veins, breccias, skarns and as intrusive-related gold deposits. The Penedela Project is characterized by a potential trend of mineralization open along strike and at depth with gold, along with silver, zinc and lead occurrences. The Project has been tested across 23 drill holes completed to date, of which 5 were executed by Western Metallica (representing ~750 metres of drilling), and 18 historical holes (representing 2,000 metres of drilling and over 1,500 samples including core and surface rock chip sampling), (*refer to Figures 1 and 2*). Mineralization remains untested below 100 metres depth, in the eastern limb and hinge, and thickness varies from 1 to 6 metres, with 5 kilometres of potential area for exploration.

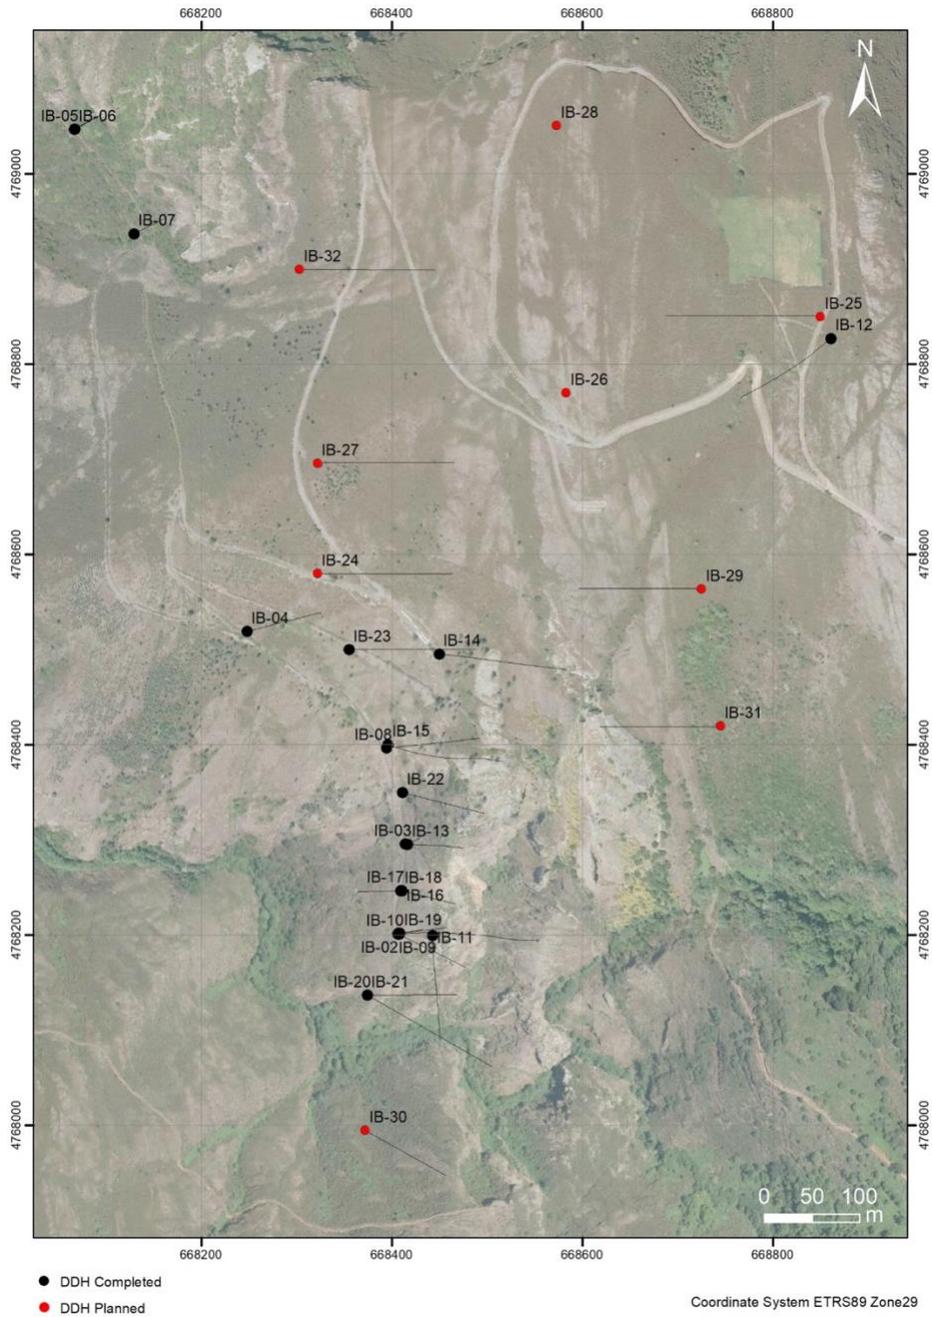

Figure 1. DDH Completed and Planned Location

The primary objective of the Phase 1 drilling campaign is to identify mineralization in the hinge of the Penedela anticline, which has yet to be drilled, and the secondary objective is to extend drilling to the north in order to test mineralization continuity in the west limb, (*refer to Table 1*). The main zones identified along the 5-kilometre gold-bearing corridor on the Penedela Property shows interesting gold potential. For this reason, the Company plans to target and test this area at depth, followed by metallurgical testing on composite drill core samples, intended to provide insight into the depth extension and potential mineralization down-plunge.

Gregory Duras, Chief Executive Officer comments, *"We chose to launch the drilling program at the Penedela Project being a high-priority target, located in a historic gold camp in the Ibias district of the Iberian Peninsula of Spain, a region that has seen increased investment and exploration success. Western Metallica's technical team is being very systematic in its approach to the Penedela exploration program, having compiled historical data, grab sample and core results, geophysical data, and structural mapping, enabling us to optimize our targets and maximize our chances of success. We believe 2022 will be a transformational year for WMS, where the market and shareholders can expect regular news as we aggressively develop the Penedela Project, with further follow-up drilling expected contingent on anticipated favourable results."*

The exploration team includes two senior geologists, both with extensive gold exploration experience specifically in the Asturias region, along with three field assistants, community relations and environmental managers. The firm Geonor Drilling, a leading infrastructure and drilling contractor out of Galicia (NE Spain), has been engaged to execute the planned drilling program, comprised of a total of 9 holes with an intended depth of 150 to 250 metres, (*refer to Table 1*).

Grant of Stock Options

In addition, the Company announces that it has granted 4,250,000 incentive stock options to directors, officers, employees and consultants. The incentive stock options have an exercise price of \$0.20 per share and are valid for a 5-year period from the date of grant. The options shall vest immediately with the exception of those options granted to an individual performing investor relations services, whose options will vest in accordance with TSXV policies. All Options are granted pursuant to the Company's stock option plan and are subject to the terms of the applicable grant agreements and the requirements of the TSX Venture Exchange.

The Company's Stock Option Plan allows for the issuance of up to 10% of issued and outstanding share capital in the form of incentive stock options. As a result of this grant, the Company has 4,380,000 stock options issued, representing 8.6% of the issued and outstanding share capital.

Qualified Person

The technical and scientific information in this press release has been reviewed and approved by Mr. Santiago Gonzalez-Nistal, P.Geo., Exploration Manager of Western Metallica, who is a "Qualified Person" as defined by National Instrument 43-101 - *Standards of Disclosure for Mineral Projects*. Mr. Gonzalez-Nistal is an employee of the Company and is not considered independent under NI 43-101.

About Western Metallica Resources Corp.

Western Metallica is a British Columbia company with its head office in Toronto, Ontario, trading on the TSX Venture Exchange (TSXV) under symbol WMS. Western Metallica is in the business of mineral resource exploration and development, its principal asset is its 100% owned Penedela Gold Property in the "Navelgas Gold Belt" in Asturias, Spain. Western Metallica also has an interest in two other Spanish gold projects in the "Navelgas Gold Belt" in Asturias (Valledor and Sierra Alta) and one project located in Andalucia (Nueva Celti).
